Nitin Kumar Pandey

nitinpandey1304@gmail.com 8840089220 nitinkrpandey NitinTheGreat

Education

BTech Vellore Institute of Technology , Computer Science & Engineering July 2023 - July 2027

- CGPA : 9.06/10.0

AISSCE G.N. National Public School, Gorakhpur July 2020 – July 2022

ICSE Little Flower School , Gorakhpur July 2020

Experience

- **Software Developer Intern | Loadminds , Canada** May 2025- Present
  - Developed an AI-powered voice assistant for trucking dispatchers, automating dispatch workflows and reducing manual efforts by over 90%.
  - Engineered a proprietary backend using LangGraph, Gemini Real-time API, and LiveKit (WebRTC) achieving conversational latency under 1 second for human-like interactions.
  - Developed an LLM-powered email ingestion and quoting engine as a multi-agent workflow (dispatcher, ingestion, quoting), integrated Gmail/O365 pipelines, prompt-driven extraction/classification, automating email responses to be used by the voice assistant.

Tech Stack: LangGraph , Azure Functions, LiveKit (WebRTC), Assembly AI STT, Python, AI, Next.js, Google Cloud Console , Langchain , CI/CD , Webhooks

Projects

- **Riviera '25 Website** Repository Website Link
  - Developed the official website for Riviera 2025, VIT Vellore's annual international sports and cultural fest which had over 1.6 million page views.
  - Implemented server side rendering, SEO enhancements with the use of dynamic and static pages contributing to the fest's significant online engagement.

Tech Stack: Next.js, TypeScript, Docker, RESTful API integration, CI/CD , Tailwind CSS

- **Deal Harbor** https://www.dealharbor.tech
  - Developed a full-stack, intra-university marketplace using Spring Boot and Next.js, featuring automated student verification, a real-time messaging system, and order processing with status tracking.
  - Implemented a robust security architecture including JWT authentication, OAuth2 integration, rate limiting, and encrypted password storage to ensure user data protection.
  - Engineered a server-side rendered frontend to optimize SEO and performance, leading to a responsive, real-time user experience with advanced state management.

Tech Stack: Springboot, Docker, TypeScript, Tailwind CSS, Postgres SQL using Supabase, NextJs, Azure

- **StreetGuardian** https://www.streetguardian.tech
  - Created a dual-login system for users and government admins to report and manage homelessness cases aiding targeted government intervention via user-generated data.
  - Introduced key features such as a user reward system to incentivize participation and OTP verification to validate user-submitted data.
  - Designed a dashboard with hotspot mapping (red, yellow, green zones based on number of reported cases) for data-driven interventions similar to CoWIN platform.

Tech Stack: Google Maps API, Next.js, MongoDb, Node.js, JWT, Tailwind CSS, TypeScript
